Professional Summary

I am an aspiring Full Stack Developer who enjoys turning complex problems into clean, user-friendly applications. With a strong foundation in the **MERN stack**, I focus on building scalable web solutions that bridge the gap between robust backend logic and intuitive frontend design. I am passionate about creating tools that solve real-world friction, from educational management to IoT-driven predictive maintenance.

Technical Toolkit

Languages: JavaScript (ES6+), Java, HTML5, CSS3

Frontend/Backend: React.js, Tailwind CSS, Node.js, Express.js, RESTful API Design

Data & Security: MongoDB (Atlas), Oracle SQL, Firebase/Firestore, Zero Trust Principles

Tools & Platforms: Git, GitHub, Postman, Netlify, Render, Vercel, VS Code

Experience

Voice-Controlled AI Assistant – NVIDIA Jetson AGX Orin

Dec 2024 – Feb 2025

Project Lead / AI Integration

- Engineered a real-time AI assistant for **hands-free vehicle control**, reducing driver distraction through low-latency voice command processing.
- Successfully bridged hardware and software by syncing **MATLAB simulations** with a React.js dashboard for live system monitoring and diagnostic visualization.
- Enhanced accessibility by implementing speech recognition logic capable of handling natural language commands for core vehicle functions.

Featured Projects

Tech-Connects – Hackathon Team Builder — [Live Demo](#)

- Solved the "solo developer" hurdle by creating a networking platform that matches teammates based on tech stacks and interests.
- Streamlined the onboarding process using **Firebase Google Auth** and enabled instant collaboration via **EmailJS** integration.

CampusCore – School Management System — [Live Demo](#)

- Developed a full-stack MERN solution to replace manual paperwork, featuring **role-based dashboards** for admins and teachers.
- Optimized data handling for attendance and academic records, ensuring secure and efficient system management.

Research Document Analyzer — [Live Demo](#)

- Built an intelligent parser using **React and TypeScript** to extract structured insights from dense, unstructured research papers.
- Designed custom REST APIs to transform raw data into "analyst-ready" summaries for faster information processing.

IoT Predictive Maintenance System

- Designed a proactive hardware monitoring system using **ESP32 sensors** to track vibration and temperature in real-time.
- Utilized **MQTT protocols** and Blynk Cloud to trigger instant alerts, preventing equipment failure before it occurs.

Education

GITAM University

Nov 2022 – May 2026 (Expected)

B.Tech in Computer Science Engineering — **GPA: 7.05 / 10**

- Coursework:* Software Engineering, Web Development, Data Communication, Design & Analysis of Algorithms.

Certifications & Achievements

- Salesforce Virtual Internship (2025):** Specialized in Apex, Lightning Web Components, and Cloud REST APIs.
- Zscaler Zero Trust Associate (2024):** Trained in modern enterprise security architecture and networking.
- Smart India Hackathon Finalist:** Recognized as a Top 30 team (out of 100+) for innovation in an internal university-wide hackathon.
